

Solar hot water system brisbane

Active solar water heating systems come in direct or indirect circulating systems. Direct circulation systems: These systems use pumps to circulate household water through the collectors and into the home. A direct circulation system is ideal for climates that rarely experience freezing temperatures.

The four most common hot water systems in Australia are electric, gas, heat pump and solar. Electric storage hot water systems are affordable, reliable and typically carry between 7-12 years warranty.. Gas hot water systems come in two types; storage or continuous flow. These systems work on either natural (metered) or L.P.G. (bottled) gas.
