3. Hybrid Inverters. Hybrid inverters are string inverters that can connect a storage battery to the solar PV system so the system will still work in the event of a voltage drop. Thus, a single unit will connect the panels and the battery. Lately, hybrid model prices have started dropping, being just as affordable as classic inverters.

A solar inverter costs \$1,500 to \$3,000 total on average for a medium-sized solar-panel system installation. Solar inverter prices depend on the size and whether it's a string inverter, microinverter, or hybrid model. String inverter systems cost less up front, but systems using microinverters last longer.

Hybrid solar inverters are "versatile masters" that manage and optimize the flow of electricity between solar panels, battery storage systems, loads and the power grid.
