At their core, simple grid-tied systems consist of two main components: solar panels and an inverter. The solar panels collect light from the sun, and a chemical reaction inside the panel converts the light energy into DC electricity. This DC power is then sent to the inverter, which converts it to usable AC power before sending that power to ...

Your solar inverter needs to be compatible with the rest of your solar panel system. Off-grid or partially off-grid systems are going to require a different type of inverter than one that is for purely on-grid purposes. Most solar inverters will fall into one of these three categories.
