percent of their maximum output. However, because solar photovoltaics become less efficient when hot, our cooler climate and our long summer days help make up for the cloudy days. Evaluating a Building Site - While the Pacific Northwest may have good to excellent solar potential, not every building site will be suitable for a solar installation.

It estimates the energy production and cost of energy of grid-connected PV energy systems for any address in the world. It allows homeowners, small building owners, installers, and manufacturers to easily develop estimates of the performance of potential PV installations, and can even compare solar's cost to utility bills.

What's included in a solar installation? A lot more goes into a solar panel system than the panels themselves. Here's a quick list of the equipment you get when you go solar: Solar panels: Capture energy from the sun. ...
