The SolarEdge Home Short String Inverter provides greater design flexibility by enabling significantly shorter strings for low power three phase PV systems. The inverter is optimized for installations with complex roofs,

including multi-facets and different orientations.

Just like solar panels, string inverters have varying efficiencies. An inverter's efficiency is a measure of how much energy is lost in the form of heat during the conversion from DC to AC electricity. Higher efficiency string inverters lead to higher overall system efficiencies and more solar electricity production. Size

When using a string inverter, the solar panels are wired together in a series and connected by a single string to a large inverter installed on your home next to your utility meter. A typical string inverter is around 50 pounds and around 30 inches tall, 20 inches wide, and 8 inches deep -- roughly the size of an acoustic guitar (without the ...
