quando la rete è stata scollegata.

Inherent to the design of the Backup Interface, if a grid loss occurs, the supply side becomes electrically isolated from the load side, and the PV inverter will automatically cease exportation to the grid, and will resume generation once the nano-grid has been isolated. Article 706-Energy Storage Systems (690.71)

In photovoltaic systems with a transformer-less inverter, the DC is isolated from the Ground. Modules with defective module isolation, unshielded wires, defective power optimizers, or an inverter internal fault can cause DC current leakage to the Ground (PE - protective earth). Such a fault is also called an isolation fault.
