external battery (with or without solar panel) that is designed to be used with trail cameras. 2. Insert an unlocked SD card (up to 32 G) into the SD card slot. Refer to the card symbol on the case for proper orientation. 3. With the rubber gasket between the base of the antenna and the antenna jack on the top of the camera, screw the antenna ...

As part of our efforts to optimize the usage of our cameras, Spartan Camera has changed the appearance of the battery indicator for our GoCam models. Prior to this change, GoCam's status report would show accurate voltage levels of the batteries or external power source, but the battery indicator would not always reflect the actual charge ...

\*\* 2) My next insurmountable problem as I pursue the installation of the GoCam Ghost. There is a double female connector attached to the end of the solar panel cable. The camera has a single female connection. I see where the panel is to connect to the camera in the Spartan bracket description page. Your reference to it was very helpful.

You cannot use just a solar panel with a GoCam. It needs to be a solar panel connected to a battery and the battery either needs to be 6V, or as Johnny says, use a Spartan battery box and you can use a 12V battery. You do not want to connect a 12V battery (or a 12V anything) directly to the camera or you will fry it.
