Spring-based energy storage is common in toys: jack-in-the-box, snake-in-a-can. I've heard of the opposite system - a concrete block on springs, say, a sidewalk paver in a busy city. As people walk on this block, it compresses the springs underneath it and - something-something, kinetic energy is stored for later use.

The prototype demonstrates the functionality of a spring energy storage system, while also enabling a quantitative analysis of system efficiency. Testing of the prototype revealed a peak ...
