The company weathered the ebb and flow of an emerging industry, ever-changing state and national policies, multiple recessions, a public IPO, an international ...

However, it's not just about the technology. Blakers added that there is; "Less pushback against solar farms." Delays caused by local objections, often whipped up by fossil fuel interests, have been far more effective in slowing wind construction, at least in democratic countries than large-scale solar.

SunPower, a residential solar installer, told dealers it will no longer support new leases, installations or shipments, citing weak cash flow and balance sheet. Analysts said the decision likely marks the end of SunPower as an ...

Even at that point, however, there were signs solar might eventually be the winner. The amount of solar capacity installed annually grew by around 40 percent a year from the late 70s to the middle of the last decade. The wonders of exponential growth meant the electricity produced increased a million-fold in that time.

However, in 1973 when the oil crisis shocked much of the world into thinking it should look for alternative sources of energy, solar technology was very underdeveloped and immensely expensive. Meanwhile, wind power - drawing on more than a millennium of applications to grind grain and pump water - was far closer to being ready to fill the gap.
