Introduction. The planetary system we call home is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as Pluto; dozens of moons; and millions of asteroids, comets, and meteoroids.

The immune system has many components: Antibodies (immunoglobulins) are proteins that are produced by white blood cells called B cells and that tightly bind to the antigen of an invader, tagging the invader for attack or directly neutralizing it. The body produces thousands of different antibodies. Each antibody is specific to a given antigen.

The renal system, which is also called the urinary system, is a group of organs in the body that filters out excess fluid and other substances from the bloodstream. The purpose of the renal system is to eliminate wastes from the body, regulate blood volume and pressure, control levels of electrolytes and metabolites, and regulate blood pH.

A computer system is a basic, full-featured hardware and software configuration with all the components needed to perform computing operations. It enables humans to input, process, and output data effectively and systematically. A computer system comprises several connected, integrated devices collaborating to carry out one or more tasks.

What tools is best for drawing an overview of a system for a new starter. I want to show the components and if possible the technologies they use. Current options include: Visio, Word, EA?, Paint! Visual Studio isn't an option (too expensive).

ASTRA32 shows amazing detail on numerous devices and other parts of the system. There are several categories to separate the information it gathers on hardware, like that of a motherboard, storage, and monitor information. A system summary section is perfect for seeing an overview of all the hardware and operating system details.
