

U s solar photovoltaic system and energy storage cost benchmarks

By muting the impacts of policy distortions and short-term market fluctuations, the new minimum sustainable price (MSP) benchmarks provide an effective basis for long-term PV cost analysis. However, they do not represent dynamic market conditions and should not be used for near-term policy or market analysis.

This report benchmarks U.S. solar photovoltaic (PV) system installed costs as of the first quarter of 2017 (Q1 2017). We use a bottom-up methodology, accounting for all system and project development costs incurred during the installation to model the costs for residential, commercial, and utility-scale systems.

From 2020 to 2021, residential PV-plus-storage levelized cost of energy (LCOE) fell 13%, and residential stand-alone PV LCOE fell 9%; there were 7% and 13% reductions in levelized electricity costs for commercial and utility-scale PV-plus-storage systems.

The National Renewable Energy Laboratory (NREL) has released its annual cost breakdown of installed solar photovoltaic (PV) and battery storage systems. U.S. Solar Photovoltaic System and Energy Storage Cost Benchmark: Q1 2021 details installed costs for PV systems as of the first quarter of 2021.

This report benchmarks U.S. solar photovoltaic (PV) system installed costs as of the first quarter of 2020 (Q1 2020). We use a bottom-up method, accounting for all system and project-development costs incurred during the installation to model the costs for residential (with and without storage), commercial (with and without storage), and utility-scale systems (with ...

U.S. Solar Photovoltaic System and Energy Storage Cost Benchmark: Q1 2021 details installed costs for PV systems as of the first quarter of 2021. Costs continue to fall for residential, commercial rooftop, and utility-scale PV systems--by 3%, 11%, and 12%, respectively, compared to last year.

The installed price of residential solar panel systems dropped by 26% over the last decade - from 5.7 \$/W in 2013 to 4.2 \$/W in 2022. Solar PV module prices dropped by 51% over the last decade - from 0.99 \$/W in 2013 to 0.49 \$/W in 2022. Since 2000 solar PV module prices have dropped by a massive 90%.
