(depending on the technology). The National Renewable Energy Laboratory's (NREL) System Advisory Model (SAM) is a popular, publicly available LCOE tool. Key Takeaway: Behind-the-meter generation is cost-competitive for end-use consumers when the average cost of energy is lower than or equal to the retail electricity

Organizations can procure renewable energy in three ways: 1) Owning renewable energy systems and consuming the energy they generate, 2) purchasing renewable power from third-party-owned systems, or 3) purchasing unbundled renewable energy credits (RECs). In any case, an organization needs to own and retire the RECs associated with the power in ...
