

Ups for computer

As a PC user, you'll always want to opt for a UPS with a wattage matching your PSU, with at least 50W extra power for a standard monitor or small TV. Higher-efficiency power supplies will also come in handy here, since PCs rarely need to ...

An uninterruptible power supply (UPS), offers guaranteed power protection for connected electronics. When power is interrupted, or fluctuates outside safe levels, a UPS will instantly provide clean battery backup power and surge protection for plugged-in, sensitive equipment.

High Performance Computer and Electronics UPS for Premium Power Protection. The Back-UPS Pro family offers guaranteed power protection for high performance computer systems, routers/modems, external storage devices, game consoles and other electronics in ...

An uninterruptible power supply (UPS) is a type of backup battery that will continue to provide electrical power to the electronics that you have plugged into it even if electricity from your home outlets cuts out.

The CyberPower CP900AVR is the best UPS for people who want to back up a few small electronics--such as a modem, router, PC, external hard drive, or game server--during a blackout lasting up to...

Even if you're not sitting right in front of the computer, many UPS units come with software that can detect when the unit switches to battery power, and shut down automatically (and properly) in your absence.

Whether that's a blackout, brownout, or power surge, the best UPS battery backup will give you the time to save what you're doing and turn off your machine safely. Power surges and interruptions...

Our pick for the best UPS overall goes to the APC BR1500G Backup Battery. At 1500VA/865W, it can power most devices, including computers, external hard drives, and wireless routers, from a few minutes to several hours, depending on the total connected load.
