

Argonne National Laboratory is a federally funded research and development center in Lemont, Illinois, United States. Founded in 1946, the laboratory is owned by the United States Department of Energy and administered by UChicago Argonne LLC of the University of Chicago. [2] [3] The facility is the largest national laboratory in the Midwest. Argonne had its beginnings in the ...

Research teams in the Division of Chemical and Biological Sciences conduct fundamental and applied studies of how to control and manipulate chemicals and biological materials. We work to develop new catalysts that enable more efficient chemical reactions, discover new ways to convert plants to biofuels, understand how solvents affect chemical reactions, and how ...

For 75 years, the National Laboratories have delivered tremendous scientific and technological impact against the United States' greatest national needs. Today, as America faces ever more pressing challenges of enormous complexity and scope, the National Laboratories' role is only more vital.

Argonne is a multidisciplinary science and engineering research center, where scientists and engineers answer questions, from how to obtain affordable clean energy to protecting ourselves and our environment. The laboratory works in concert with universities, industry, and other national laboratories to discover new ways to develop energy innovations through science, ...

As this list of breakthroughs attests, Laboratory discoveries have spawned industries, saved lives, generated new products, fired the imagination and helped to reveal the secrets of the universe. Rooted in the need to serve the public good and support the global community, the National Laboratories have put an American stamp on the last century ...

Oak Ridge National Laboratory is managed by UT-Battelle, [8] a limited liability partnership between the University of Tennessee and the Battelle Memorial Institute, formed in 2000 for that purpose. [9] The annual budget is US\$2.4 billion. As of 2021 there is a staff of 5,700 working at ORNL, around 2,000 of whom are scientists and engineers, [10] and an additional 3,200 guest ...

Los Alamos National Laboratory (often shortened as Los Alamos and LANL) is one of the sixteen research and development laboratories of the United States Department of Energy (DOE), located a short distance northwest of Santa Fe, New Mexico, in the American southwest st known for its central role in helping develop the first atomic bomb, LANL is one of the world's largest and ...

The Department of Energy's National Laboratories offer jobs, internships and fellowships to talented individuals. Many also have educational resources from community outreach programs to online learning modules. Visit the National Labs' jobs and internship/education pages to explore the outstanding opportunities available across one of the most productive and sophisticated ...

Us national laboratory

The National Laboratories offer a wide range of jobs, internships, and fellowships in scores of scientific and engineering disciplines. The Laboratories are also invested in career growth, offering multiple opportunities for upward mobility through mentoring, leadership training, and rotational/temporary assignments....

Los Alamos National Laboratory (often shortened as Los Alamos and LANL) is one of the sixteen research and development laboratories of the United States Department of Energy (DOE), located a short distance northwest of Santa Fe, ...

Oak Ridge National Laboratory: USA: 10 (423) Argonne National Laboratory * USA: 11 (425) Smithsonian Institution * USA: 12 (503) National Radio Astronomy Observatory Charlottesville: USA: 13 (555) NASA Goddard Space Flight Center: USA:

4 days ago; The National Renewable Energy Laboratory (NREL) is transforming energy through research, development, commercialization, and deployment of renewable energy and energy efficiency technologies. Partner with us to accelerate the transition of renewable energy and energy efficiency technologies to the marketplace.

About NREL. At the National Renewable Energy Laboratory (NREL), we focus on creative answers to today's energy challenges. From breakthroughs in fundamental science to new clean technologies to integrated energy systems that power our lives, NREL researchers are transforming the way the nation and the world use energy.

The term national laboratory may generically refer to any government-operated or -sponsored laboratory. In the United States, laboratories that have "National Laboratory" in their name include: United States Department of Energy national laboratories; Frederick National Laboratory for Cancer Research, sponsored by the National Cancer Institute

Savannah River National Laboratory is the U.S. Department of Energy Office of Environmental Management's national laboratory. In this role, SRNL applies its unique expertise and applied technology capabilities to assist DOE sites across the nation in meeting their environmental and legacy management missions.

The National Laboratory System. The national laboratory system is comprised of 17 of the country's top scientific research facilities. The laboratories are owned by the U.S. Department of Energy and house many of the world's top scientists and engineers, as well as unique equipment, some of which is unmatched anywhere else in the world.

Pacific Northwest National Laboratory is a leading center for scientific discovery in chemistry, data analytics, and Earth science, and for technological innovation in sustainable energy and national security. Latest News . NOVEMBER 4, 2024. LabSigns Project Brings New Scientific Terms to American Sign Language.

Many people live very close to one of the Energy Department's 17 National Labs and don't even know it. After checking out our new National Labs map, you won't be one of these people. The National Labs are charged with developing science and technology to further our nation's energy sector, and conducting research that spurs greater innovation.

OverviewThe laboratories and their research missionNational Scientific User FacilitiesHistoryIn popular cultureFurther readingExternal linksThe United States Department of Energy National Laboratories and Technology Centers is a system of laboratories overseen by the United States Department of Energy (DOE) for scientific and technological research. The primary mission of the DOE national laboratories is to conduct research and development (R& D) addressing national priorities: energy and climate, the environment, national security

The Department of Energy's 17 National Laboratories form a nationwide network that is working to solve some of the world's greatest scientific challenges. At the National Labs, researchers are developing new energy technologies, advancing the frontiers of ...

We advance fundamental research in nuclear and particle physics to gain a deeper understanding of matter, energy, space, and time; apply photon sciences and nanomaterials research to energy challenges of critical importance to the nation; and perform cross-disciplinary research on computation, sustainable energy, national security, and Earth's ecosystems.

From Business Wire, March 22, 2021: On World Water Day 2021, the University of Chicago, Argonne National Laboratory, and Fermi National Accelerator Laboratory highlight Chicago and the greater Midwest as a hub for water innovation. The girls in ...

6 days ago· Idaho National Laboratory (INL) is home to researchers and support staff focused on innovations in nuclear research, renewable energy systems and security solutions that are changing the world. ... Though we are diverse in our research, all our missions call for us to advance human knowledge to make a safer, cleaner world with a higher standard ...

The National Laboratories conduct research and development that addresses the Department of Energy's core missions in energy, science, national security, and environmental stewardship. It is often said that the Laboratories exist to tackle particularly difficult problems that fall beyond the...

Exceptional service in the national interest Our unique responsibilities in the nuclear weapons program create a foundation from which we leverage capabilities, enabling us to solve complex national security problems. National Priorities We strive to become the laboratory that the U.S. turns to first for technology solutions to the most challenging problems that threaten peace [...]

The National Ignition Facility (NIF) is a laser-based inertial confinement fusion (ICF) research device, located at Lawrence Livermore National Laboratory in Livermore, California, United States. NIF's mission is to

Us national laboratory

achieve fusion ignition with high energy gain .

Oak Ridge National Laboratory delivers scientific discoveries and technical breakthroughs needed to realize solutions in energy and national security and provide economic benefit to the nation. We conduct world-leading research that translates science into solutions for the world's biggest ...

3 days ago· As one of 17 national labs in the U.S. Department of Energy complex, Idaho National Laboratory is home to more than 6,100 researchers and support staff focused on innovations in nuclear research, renewable energy systems and security solutions that are changing the world.
