Base year costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2022). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

Battery-based energy storage capacity installations soared more than 1200% between 2018 and 1H2023, ... 57% of utility-scale US energy storage capacity was used for price arbitrage, up from 17% in 2019. 12 Similarly, the capacity used for spinning reserve has also increased multifold. This illustrates the changing landscape of energy storage ...

The concept of utility-scale mobile battery energy storage systems (MBESS) represents the combination of BESS and transportation methods such as the truck and train. The MBESS has the advantage of solving the grid congestion as the capacity could be transported by vehicles to change the grid connection point physically.
