Without a birth time, the placement of planets in houses cannot be determined, which affects interpretations related to aspects of life like career, relationships, and personal growth. Moon Sign Ambiguity: While the Moon sign can often be determined without a birth time, if the birth occurred on a day the Moon changed signs, the exact sign may ...

As you zoom out, the solar system's outer planets - Jupiter, Saturn, Uranus and Neptune - come into view. The date slider allows you to move forwards or backwards by a few months to see the motion of the planets along their orbits. The top panel shows where the planets appear in the night sky from the Earth.

What Planets Are in Retrograde Right Now? In ancient astrology, it was accepted that planets in retrograde were journeying through the underworld, gathering insights, perspectives, and information from the unseen world. This understanding was used as a metaphor for what happens within our inner worlds when a planet is in retrograde.

A planetary alignment that has been developing for months is finally here. Depending on local viewing conditions, Mercury may now be visible alongside Venus, Saturn, Mars and Jupiter in a march across the predawn sky, visible from the Northern Hemisphere. It's the first alignment of the five visible planets in our solar system since 2020.
